

# Virtual Reality in Plumbing Training

## Exercise Health and Safety Test

Virtual reality (VR) revolutionizes health and safety testing in various industries, including construction, manufacturing, healthcare, and exercise training.

## Cutting & Straightening Steel Pipes

By simulating real-world tasks, users can improve their skills and learn best practices in handling steel pipes for various industrial and construction projects.

## Extension of a Hot & Cold-Water Network Made of Galvanized Steel

The module covers the entire process, from planning and cutting pipes to installation and testing, providing users with the skills they need to handle real-world projects.

## Electric Heater Installation

This immersive training is ideal for electricians, HVAC professionals, maintenance technicians, and trainees who want to learn the proper techniques and safety protocols involved in electric heater installation.

## Installing the Solar Heater & Connecting It to The Water Network

This immersive training is ideal for plumbing professionals, solar energy technicians, civil engineers, and students who want to learn the proper techniques and safety measures required for solar heater installation, plumbing integration, and system testing.

# Our team is always ready to help.
